Scoring the MAST

The version of the MAST included on this web site was provided by Professor Selzer, who indicated that the version published in 1971 in the American Journal of Psychiatry was modified in 1980.

In scoring the MAST points are assigned to a response depending upon whether the item is worded positively or negatively.

For items 1, 4, 6 and 7 negative answers are consistent with alcoholic responses.

For items 2, 3, 5, and 9-25 positive responses are consistent with alcoholic responses.

The scale assigns a 1-5 weighting to each of the items, with a rating of 5 being considered diagnostic of alcoholism. Questions that were highly discriminating were given a value of two points and others assigned a one-point value. An alcoholic response to questions 8, 19, or 20 is considered diagnostic and is assigned a value of five points.

A total score is computed as a sum of item values as seen in the table below. Total scores range from 0 to 53.
